2. Description of the MMPI Escalator Plan Series 31

The MMPI Escalator Plan Series 31 (the Plan) is an innovative new Investment Solution designed for investors who wish to invest in a Structured Investment Strategy that offers attractive potential investment returns linked to the performance of the EuroStoxx 50 Index; and for investors seeking a risk-reducing mechanism to provide a degree of protection from normal stock market risk. The Plan is suitable as part of the process of constructing a genuinely diversified investment portfolio.

The Plan is in the form of Preference Share linked Certificates issued under BNP Paribas Arbitrage Issuance B.V.'s Note, Warrant and Certificate Programme. The Final Terms should be read together with the Issuer's Preference Share-Linked Securities Base Prospectus dated 9 June 2015 for the complete terms and conditions of the Securities. A copy of the Base Prospectus is available from MMPI on request.

2.1 Investment Rationale

The investment rationale for investing in Equity Indices can be summarised as follows:-

Equities (shares) as a long term investment: Although investing in equities (shares) involves a degree of investment risk and there will be volatile periods along the way, in the long term, equities tend to outperform other assets like bonds, property, cash etc. By adopting a medium term approach, equity investors can mitigate the risks and short term volatility associated with stock market investment while benefiting from the long term capital growth potential that stock markets can provide.

The Underlying Asset of the Plan is the EuroStoxx 50 index selected by MMPI.

The EuroStoxx 50 Index

The EuroStoxx50 represents European listed large capitalisation stocks. This index includes many well know names such as Santander Bank; BMW; AXA insurance; Danone; Deutsche Bank, etc. The index is a fair representation of the quality of companies that exist within Europe with both domestic and international focus. Many analysts continue to like European markets as an investment relative to other core international markets because the valuations of European shares are more attractive with the EuroStoxx50 index offering a 4.9% dividend yield on average and a 12 month forward P/E ratio of 13x - versus the S&P500, for instance, which trades on a 12 month forward P/E ratio of 17x and offers investors a dividend yield of less than 2.5%.

Further to this, many analysts view Europe as in early stage recovery mode so earnings growth has significantly more potential than in the USA where interest rates and labour costs are starting to impact earnings momentum. Finally, many analysts see central banks supporting equities in Europe with continued quantitative easing measures focused on ensuring plentiful liquidity.
