Warning: Deductions for costs and charges are not made uniformly throughout the life of the product, but are loaded disproportionately onto the early period. If an investor sells the Bond prior to the end of the 5-year term, the practice of front-end loading will impact on the amount of money that the investor receives. The investor may not get back the full amount they invested.

2. Description of the MMPI Escalator Plan Series 76

The Plan is an innovative new Investment Solution designed for investors who wish to invest in a Structured Retail Product that offers attractive potential investment returns linked to the performance of the EuroStoxx Select Dividend 30 Index (Price EUR) (selected by MMPI); and for investors seeking a risk-reducing mechanism to provide a degree of protection from normal stock market risk. The Plan is suitable as part of the process of constructing a genuinely diversified investment portfolio.

The Bond is in the form of a Preference Share linked Note issued under Morgan Stanley BV's Base Prospectus dated 16 July 2021 and the supplements to the Base Prospectus dated 17 August 2021, 14 October 2021, 29 October 2021, 12 November 2021, 8 February 2022 and 3 March 2022. Copies of the Base Prospectus are available from MMPI on request.

This Plan is in the form of a Preference share linked Note involving derivatives and is therefore a complex product. Investors should not invest in this Plan without having sufficient knowledge, experience and/or without having received professional advice from MMPI to make a meaningful evaluation of the merits and risks of investing in a product of this type, and the information contained in this document and the Base Prospectus.

2.1 Investment Rationale

The investment rationale for investing in equity Indices can be summarised as follows:-

Equities (shares) as a long term investment: Although investing in equities (shares) involves a degree of investment risk and there will be volatile periods along the way, in the long term, equities tend to outperform other assets like bonds, property, cash etc. By adopting a medium term approach, equity investors can mitigate the risks and short term volatility associated with stock market investment while benefiting from the long term capital growth potential that stock markets can provide.

EuroStoxx Select Dividend 30 Index (Price EUR)

The Index offers investors the ideal tool to track high dividend yielding companies across the 8 Eurozone countries: Austria, Belgium, Finland, France, Germany, Italy, the Netherlands and Portugal.

The Stoxx Select Dividend Indices are designed to measure the performance of the highest dividend paying stocks relative to their home markets. Stocks are screened by defined historical non negative dividend per share growth rates and dividend to earnings per share (EPS) ratios.

Warning: Dividends distributed by the Index constituents will not be re-invested in the Index nor distributed to investors.

For more details regarding this Index, the 28 February 2022 Fact Sheet is available on the Stoxx website at: <https://www.stoxx.com/document/Indices/Factsheets/2022/February/SD3E.pdf>

MMPI chose the EuroStoxx Select Dividend 30 Index (Price EUR) rather than the Benchmark EuroStoxx 50 Index due to its lower cost. The lower cost characteristics of the EuroStoxx Select Dividend 30 Index (Price EUR) provide higher potential product returns to investors in the Plan for the same SRI 5 risk budget.

Past Performance

The chart below describes the performance of the Index over the last 5 years. The Index level on 20 March 2017 was 2,042 and has decreased by -16.36% to 1,708 on 11 March 2022. Over the course of the last 5 years, the Index peaked at 2,182 on 30 October 2017 and was at its lowest level of 1,235 in the immediate outbreak of COVID-19 on 16 March 2020.

Warning: Past Performance is not a reliable guide to future performance.

Warning: If you invest in this Bond you may lose some or all of the money you invest.

Warning: Back testing is conducted using the closing level of the Index each day. The Plan's Capital at Risk Feature is such that investors will receive back their initial capital if the Index has not fallen by 40% or more at any time during the term. The closing level of the Index is used during the back testing period as it is not practical to observe the Index level at any time during such a 10 year period.

2.6 Summary Risk Indicator

The Summary Risk Indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Morgan Stanley is not able to pay the Investor. The risk indicator assumes the product is held until maturity.

MMPI considers the Plan to have a **Summary Risk Indicator of 5** on its risk scale as follows:-

The actual risk can vary significantly if the Investor encashes prior to maturity. Investors may not be able to sell this product easily or may have to sell at a price that significantly impacts on how much the Investor gets back.

The Summary Risk Indicator of 5 rates the potential losses from future performance at a medium to high level, and poor market conditions are very unlikely to impact Morgan Stanley's capacity to pay you.

Investors will receive payments in the product's currency, which may be different from Investor's domestic currency. In this case, be aware of currency risk. The final return Investors will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

This product does not include any protection from future market performance so you could lose some or all of your investment.

If Morgan Stanley is not able to pay you what is owed, you could lose your entire investment.

For detailed information about all risks please refer to the risk sections of the Base Prospectus as specified in the section 'Other relevant information' below.

Warning: If you invest in this Plan you may lose some or all of the money you invest.

Warning: The value of your investment can go down as well as up.

2.7 Liquidity

The underlying Preference Share linked Notes of the Plan will be listed on the Luxembourg Stock Exchange and are tradable investments (subject to the Warnings below).

Morgan Stanley & Co International plc endeavours to make a secondary market in the Preference Share linked Notes, subject to it being satisfied that normal market conditions prevail. Any prices indicated will be dependent upon factors affecting or likely to affect the value of the Notes such as, but not limited to, the remaining time to the Maturity Date, the outstanding principal amount, the Issuer's or, if applicable, the Guarantor's credit risk, the performance and volatility of the underlying asset, interest rates, exchange rates, credit spreads and any incidental costs etc. To the extent Morgan Stanley & Co International plc holds Notes that it can offer and subject to it being satisfied that normal market conditions prevail, such prices will normally have a bid-offer spread of 1%.

Morgan Stanley & Co International plc may determine a bid and offer price in a different manner than other market participants and prices can vary. Sometimes this variance may be substantial. Morgan Stanley & Co International plc may be the only market maker in the Preference Share linked Notes which may affect liquidity.

Therefore, investors will, in normal market conditions be able to sell the Preference Share linked Notes at any time during the term. The price at which the Preference Share linked Notes can be sold will be the open market value determined by Morgan Stanley & Co International plc which will take fees and charges into account and can be lower than the initial amount invested.

Warning: Morgan Stanley & Co International plc may determine a bid and offer price in a different manner than other market participants and prices can vary. Sometimes this variance may be substantial. Morgan Stanley & Co International plc may be the only market maker in the Preference Share linked Notes which may affect liquidity.

Warning: No representation is made as to the existence of a market for the underlying Preference Share linked Notes. Morgan Stanley & Co International plc will endeavour to make a secondary market in the Preference Share linked Notes, subject to the bank being satisfied that normal market conditions prevail. Any prices indicated will be dependent upon factors affecting or likely to affect the value of the Preference Share linked Notes such as, but not limited to, the remaining time to the Maturity Date, the outstanding principal amount, the Issuer's or, if applicable, the Guarantor's credit risk, the performance and volatility of the underlying asset, interest rates, exchange rates, credit spreads, and any incidental costs etc.

Warning: Deductions for costs and charges are not made uniformly throughout the life of the product, but are loaded disproportionately onto the early period. If an investor sells the Plan prior to the end of the 5 year term, the practice of front-end loading will impact on the amount of money that the investor receives. The investor may not get back the full amount they invested.

Warning: If you invest in this Plan you may lose some or all of the money you invest.

Warning: The value of your investment can go down as well as up.

2.8 Costs & Charges

Plan Costs & Charges

The Costs & Charges associated with the Plan are fully reflected in the terms. This means that they are built into the price paid for the Plan.

The total indicative commission payable to MMPI is 5% of the amount initially invested (based on market conditions on 17 March 2022). This commission amount will be reflected in the quoted price of the Plan if sold prior to maturity.

Administrative Costs & Charges

All Investors via an **Investment Platform** will typically face the following fees and charges when investing in the Plan:-

Off Platform Funds Commission (requires manual processing) 30bps per transaction;

Key Information Document Costs Illustration

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get.

The total costs take into account the Morgan Stanley's fees, one-off, ongoing and incidental costs.

Costs over time

The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future:

Scenarios	If you cash in after 1 year	If you cash in after 3 years	If you cash in at the end of the recommended holding period
Total Costs	€840.58	€773.16	€795.72
Impact on return (RIY) per year	8.40579%	2.48927%	1.49435%

Composition of Costs

The table below shows:

- the impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period;
- the meaning of the different cost categories.

This table shows the impact on return per year			
One-off costs	Entry costs	1.49435%	The impact of the costs already included in the price.
	Exit costs	0.0%	The impact of the costs of exiting your investment when it matures.
Ongoing costs	Other ongoing costs	0.0%	The impact of the costs that we take each year for managing your investments.

Warning: Deductions for costs and charges are not made uniformly throughout the life of the Plan, but are loaded disproportionately onto the early period. If an investor sells the Plan prior to the end of the 5 year term, the practice of front-end loading will impact on the amount of money that the investor receives. The investor may not get back the full amount they invested.

2.9 What happens if I die before the Plan Matures?

In the event of death of a sole investor or a surviving joint investor, the Plan may be held by the administrators of the estate until maturity. Alternatively, the Plan may be sold prior to maturity, subject to normal probate regulations, at its realisable value which may be lower than the original amount invested and lower than the Soft Capital Protected amount. The proceeds from the sale of the Plan as a result of death will be paid to your Omnium or Conexim Account or in the case of an insured pension or post retirement investor, to the investing life company.

Warning: Deductions for costs and charges are not made uniformly throughout the life of the Plan, but are loaded disproportionately onto the early period. If an investor sells the Plan prior to the end of the 5 year term as a result of death, the practice of front-end loading will impact on the amount of money that the investor receives back. The investor may not get back the full amount they invested.

2.10 Taxation

It is our understanding that the potential return will be subject to Capital Gains Tax (CGT) in the case of Personal Investors and exempt from taxation in the case of Pension and Post Retirement Investors. However, the taxation treatment of the Plan will be based on Revenue's policy at the time of the realising of any gain and on the individual circumstances of each investor.

Warning: The above information represents our understanding of the taxation treatment of the Plan but does not constitute tax advice. Investors should satisfy themselves independently of the taxation treatment of the Plan in their particular circumstances.

Warning: Investors should satisfy themselves independently in relation to revenue reporting requirements and the implications of non-disclosure where required.

Warning: Tax rates and the Revenue's policy in relation to the taxation treatment of this instrument are subject to change without notice.

2.11 Administrative Process
